User Manual

After loading the application, the user will be presented with the window shown in Figure 1. The two text fields will appear blank until the first flash card is created.

Figure 1: Application Window

To add the first flash card, simply fill in the term and definition text fields and click the button at the top right corner of the application labeled "add new card". Additional cards can be created by replacing the text in the term and definition fields and clicking the "add new card" button. If the definition of a term needs to be changed after adding a card, re-type the definition and then click the "add new card" button again.

After adding some flash cards to the deck, click the "shuffle cards" button on the right side of the window. The user is now ready to start studying their terms! Each time a new card is presented, the definition will be hidden. To make the definition appear, click the button labeled "show definition". To move on to the next term in the deck, click the button labeled "next card". The previous term can be seen by pressing "previous card".

An example flash card can be seen in Figure 2 below. The user can add as many flash cards as they would like and they can shuffle the order of the cards at any time. The deck can be cleared by closing and restarting the application.
